

RESIKLOS

Hard times don't create heroes. It is during the hard times when the "HERO" within us is revealed.

BE A HERO JOIN RESIKLOS

"The Country's First Gamified Plastic Waste Management"

RELEASE NOTES 2.0 FOR

EARLY MOVERS

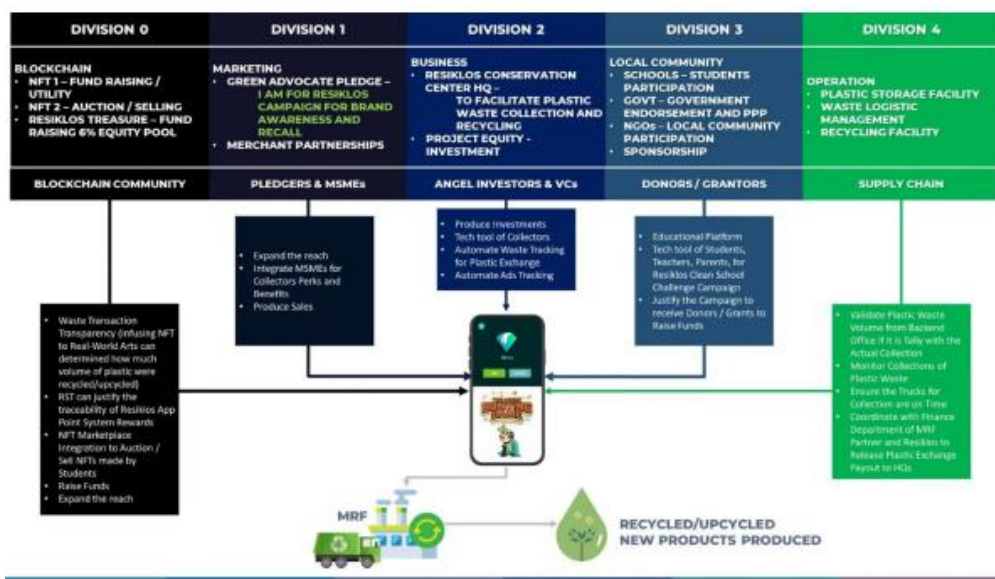

www.resiklos.com

info@resiklos.com

INTRODUCTION

WE ARE GROWING! Resiklos Team has established the final direction for the implementation of Phase 2.1 to Phase 3 in 2023 in preparation for wide rollout of the project. Despite the ongoing recession that affects the world market and trading -- Crypto Market, Stocks, and Forex -- we have decided to focus first on the actual implementation of project to stabilize its foot on solving plastic crisis in the country. This will boost our credibility and integrity to the current blockchain community of about 21,000 around the world which the Division Zero (see the team structure below) has already established. To stabilize the proper implementation, we have reorganized the team's structure to facilitate and prepare for the massive campaign and operation of Resiklos in Metro Manila, Metro Cebu and Metro Davao. (We will post the updated team members on our website soon).

OVERVIEW OF THE ACTUAL IMPLEMENTATION

Resiklos was created to establish a gamified framework for plastic waste collection, design, pilot testing, and scaling of the closed-loop ecosystem. Community Partner, as a participant in the closed-loop ecosystem, will coordinate with its designated community/ies, provide a storage facility for the plastic wastes collected, and provide digital rewards, as agreed upon with RESIKLOS TEAM, to the users of the Mobile Application. The long-term vision of this proposal is to achieve an economically viable, efficient, and user-friendly closed-loop ecosystem for its participants including companies, recyclers, up-cyclers, and other organizations to greatly reduce, if not totally eliminate, plastic waste in landfills and oceans.

GOAL

For Actual Implementation: The goal is to make the entire effort of trash segregation and disposal less time consuming and less confusing by citing various categories for recyclable materials with emphasis on the benefits of including potential rewards for people within the community through a mobile application platform.

Effect on the blockchain community: The blockchain community became smart and they were very keen on different blockchain projects. There are a lot of projects that only intend to deceive their participants. One of our objectives is to prove them that Resiklos is a long-term project and it adheres to the environment provisions from the global call of United Nations to the countries that have huge problem on plastic waste management. We need to change the system and set apart from the short-term projects and from those who failed to deliver. Resiklos project is for the next generation to come to have a clean and healthy environment.

OUR IMPACT

Stable environment is integral for the full enjoyment of basic human rights, including the rights to life, health, food, water and sanitation, and quality of life. Tokenizing plastic waste is a way to invest in environmental sustainability that will ensure healthy lives. When we are healthy, we can work, we can learn, and we can earn. Then a country can maximize its own human resources for growth.

OUR DIRECTION

■ **Learning and building capacity.** This can include the sharing of knowledge regarding how the parties can improve waste management and increase recycling rates within the community, promote sustainability, and provide recycling initiatives. COMUSPACE – Community Space Partners within the area will play an important role in helping promote and implement Resiklos App Features – Treasure Hunting Game in its designated community/ies. COMUSPACE will oversee the disposal and co-processing of collected plastic wastes. This can include sustainable strategies as well as communications that will build public segregation awareness and support for reducing waste.

■ **Innovation of Plastic Offsetting.** The project intends to issue Plastic Neutral Credits that are already available in Resiklos Mobile App and to upgrade this to exchange for Utility Token in 2023. Becoming Plastic Neutral is a great way to help stop leakage of plastic entering the oceans and littering the environment. We will reestablish for the foreign blockchain community the opportunity to buy the Resiklos Utility Token (Resiklos Treasure, former name is Resiklos Gem) which is a great way to manage and reduce plastic waste in landfill and ocean, whereby the fiat money coming from the collection goes to Resiklos Self-Sustaining Ecosystem in a remote and vulnerable community, where they collect and recycle a weight of plastic equivalent to Plastic Footprint on the supporter's behalf.

■ **The Community Partners.** They will promote recycling and the use of application in schools and local communities (barangay) by conducting Resiklos Clean Challenge to establish engagement. Resiklos Team will also establish partnerships with merchants to expand digital rewards such as vouchers of goods and services for the users of the Resiklos Mobile App.

■ **Manufacturing Recycling Facility.** We will deploy our own manufacturing recycling facility that converts plastic waste into Biodiesel and Construction Materials for consumer's use that will boost Resiklos self-sustaining ecosystem and local economy.

RESIKLOS CLEAN CHALLENGE STARTED

Resiklos started the Clean Challenge on October 10, 2022. As a game, Resiklos is proposed to be played by Basic Education students as part of an existing curriculum on solid waste management, thus, innovating and operating as instructional technology on the standards and requirements

currently observed in the classroom and in school setting. Resiklos may also be introduced as part of a Local Government Unit's overall solid waste management plan that promotes awareness and sustainable approach on Recycling. Here, the game could be played by household members / families within their respective communities as Barangay-sponsored event, i.e. "Resiklos Clean Household Challenge", or as a game played by youths as sponsored event by their respective Sangguniang Kabataan, i.e. "Resiklos Plastic Hunt Challenge". Our actual implementation footage:

- <https://www.youtube.com/watch?v=GTVIOzy8d9E> -
<https://www.youtube.com/watch?v=A3mDaWDzrY>

Taken all together, the foregoing and all other possible forms and configurations result to a convergent output: a community-based and community-participated environmental protection that establishes a SUSTAINABLE CIRCULAR ECONOMY facilitated by innovative technology and fuelled by plastic waste.

PLAN TO BOOST RESIKLOS SELF-SUSTAINING PROGRAM FOR EARLY MOVERS

In addition to the future use of token for Early Movers, the 6% Equity Pool "Convertible Notes" will be sent to the new enhanced dashboard to be accessed on November 25, 2022. Below are the lists of sustainability model where Early Movers can enjoy the pool of dividends every last quarter of the year aligned to the provisions under Resiklos Holdings Inc. stakeholders' policy (Convertible Notes with notarized provision policy to be released on January 25, 2023).

SUSTAINABILITY TYPE	PRICE	NET	EARLY MOVERS 6% EQUITY POOL SHARE	VOLUME IN 3-5 YEARS	POTENTIAL INCOME OF EARLY MOVERS IN 3-5 YEARS
Plastic Exchange	P5.00	P2.50	P0.15	1,170,000,000 billion kg of plastic waste	P175,500,000 million
Merchandise (Tiles 24x24in from Recycled Plastic Waste)	P300.00	P100	P6.00	234,000,000 million tiles	P1,404,000,000 billion
TOTAL					P1,579,500,000 billion

QUICK FEASIBILITY

Plastic Exchange.

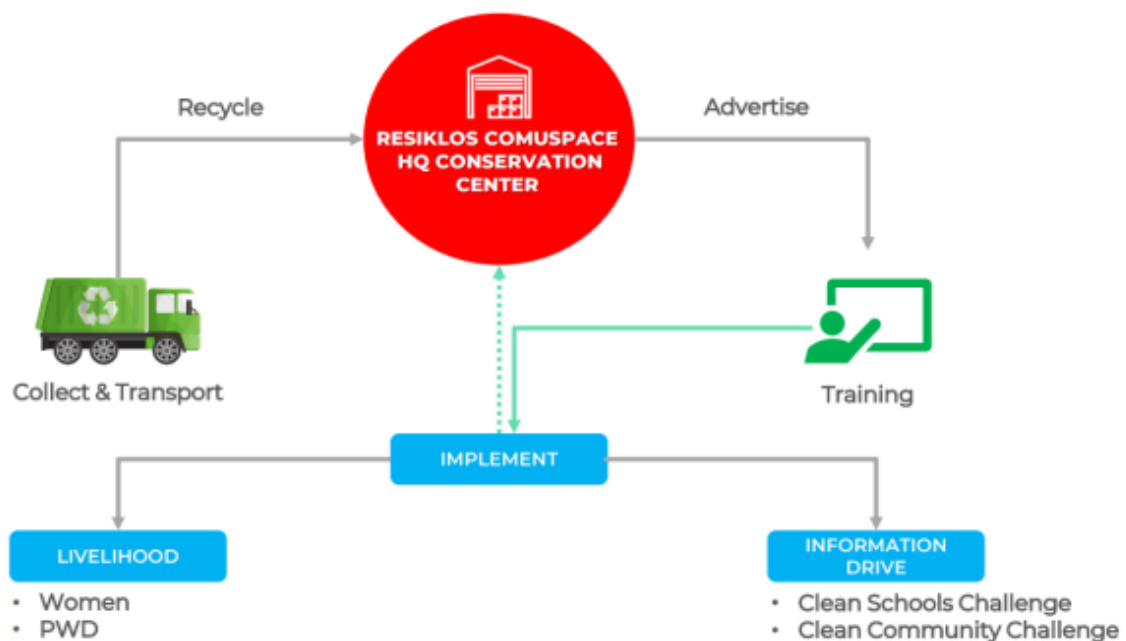

The scope of plastic collection will cover Metro Manila, CALABARZON, Metro Cebu, and Metro Davao in 3-5 Years. Based on the data of United Nations, every Filipino is producing 500 grams to 5kg of plastic. The above computation is based on 40% of Working Adult and 25% of Students in the country with a total population of 100,000,000 which produces 100 grams of plastic waste per day **(65,000,000 daily plastic producers X 10% Market Share = 6,500,000 total of plastic generators per day) X (100 grams of plastic per day X 6,500,000 total of plastic generators per day = 650,000 kg plastic waste per day) X (12 months x 5 years = 1,170,000,000 billion plastic waste potential collection for exchange).**

Merchandise from Recycled byproduct – Tiles 24x24in. Our tiles are high selling due to their pricing point which are way lowered compared to ceramic tiles and are also more durable. We have current demand for local and international market. The above computation is based from this: **5kg of plastic waste = 24x24 1-inch thick which costs P300 per piece.**

IMPLEMENTATION MODEL

Public Private Partnership with Local Government Units:

Whereas, Section 2.4. of the National Budget Memorandum No. 143, Dated April 28, 2022, explicitly provides: “2.4 Climate and Disaster Risk Resilience, and Environmental Management and Protection In 2021”, the Philippines ranked as the fourth most affected country by extreme weather events for the period 2000-2019 in the Global Climate Risk Index. As the country is exposed to risks caused by extreme climate events and natural/biological hazards, efforts in increasing climate and disaster risk resilience and environment protection must also be intensified. Support shall be given to programs and interventions that underpin building Climate Change Adaptation, Mitigation, and Disaster Risk Reduction (CCAM- DRR) resilience.

Community Rollout:

UTILITY TOKEN STATUS

We have merged with Hello Charlie Team and assigned Division Zero which consists of 20 members who will manage our social media accounts and global blockchain community. We cannot launch the token on December of 2022 as planned due to global recession and legal risks timetable. We need to work hand in hand with SEC and BSP for EMI license before we can legally launch our Utility Token. As you are well aware of, there are changes on the SEC provisions from time to time on the scope of an organization who would want to establish an Initial Coin Offering in the Philippines. We should be aligned with the SEC provisions. Since our project is not the same with other organizations who compromised strong foundation on the actual use of the token, we focused instead on the ground operation of Resiklos to build a strong community and stabilize the actual use of our Utility Token for Digital Plastic Exchange Incentive Mechanism. Instead of launching our main Utility Token, we came up with a solid concept to launch an NFT (Arts to sell for global market) for the following benefits:

- Legal wise, it is easier to justify why it is needed for the Resiklos Ecosystem;
- We can complete the need on the financial aspect to build a robust security and tech development for Resiklos Blockchain Platform;

- We have merged with Hello Charlie Team who have succeeded in their NFT launching;
- We have secured a 21,000 global blockchain community who can support Resiklos NFT Launching on the 4th week of January of 2023. To compensate our Early Movers, we have decided to give a free NFT called Resiklos Hero Badge that can be utilized also in the Resiklos Mobile Application and can be sold or traded immediately on NFT Marketplace starting on February of 2023. We will retain your main Utility Token (Resiklos Treasure former Resiklos Gem) to be launched on the 3rd quarter of 2023.

BIG COMPANIES ARE COMING IN FOR STRATEGIC PARTNERSHIPS

Division 1 – The strategy of Marketing Team is to onboard big brands for the benefit of our current and future participants in the Digital Plastic Waste Management. KonsultaMD which is the biggest online health consultation in the country is already onboarded and pledged P1,000,000 (1M) worth of Vouchers. Air Asia, Pepsi, San Miguel, Coca Cola and other 100 big brands who want to offset their plastic for their Corporate Social Responsibility Program are next in line. Our current partners:

INSITUTIONAL PARTNERS

OTHER UPDATES

- December 15, 2022 – Early Mover’s Night (Location to be updated)
- November 28 onwards – Webinar for Early Movers
- December 05, 2022 – Roadmap based on the new milestones and development

December 10, 2022 – Updated Whitepaper to be posted on www.resiklos.com

December 14, 2022 – Grand Summit event for the Resiklos School Challenge in Binan Laguna

February 01, 2023 – Ground Operation in Pasig City, Pangasinan District 2 & 3 and Sta Rosa Laguna

November 29, 2022 - Other updated footage and images of activities from August 1 – November 25, 2022 will be posted in the news section on www.resiklos.com
